

BEFORE A MINE IS BUILT ITS ENVIRONMENTAL RISKS ARE DESIGNED FOR

Baseline data, monitoring, and
engineering controls are shaping how
Diablillos prepares for its next stage.

IN MINING, **ENVIRONMENTAL MANAGEMENT** BEGINS BEFORE CONSTRUCTION

● At Diablillos, environmental work is being integrated into project planning, feasibility studies, permitting, and operational readiness.

NO DISCHARGE TO SURFACE WATER BODIES

In the current advanced exploration stage, camp sewage effluent is treated through a secondary aerobic treatment system, followed by controlled soil infiltration.

2.68 ML

off effluent generated
and treated according to
applicable regulatory
parameters.

regarding
effluents

PREVENTION, MONITORING, AND CONTROLS

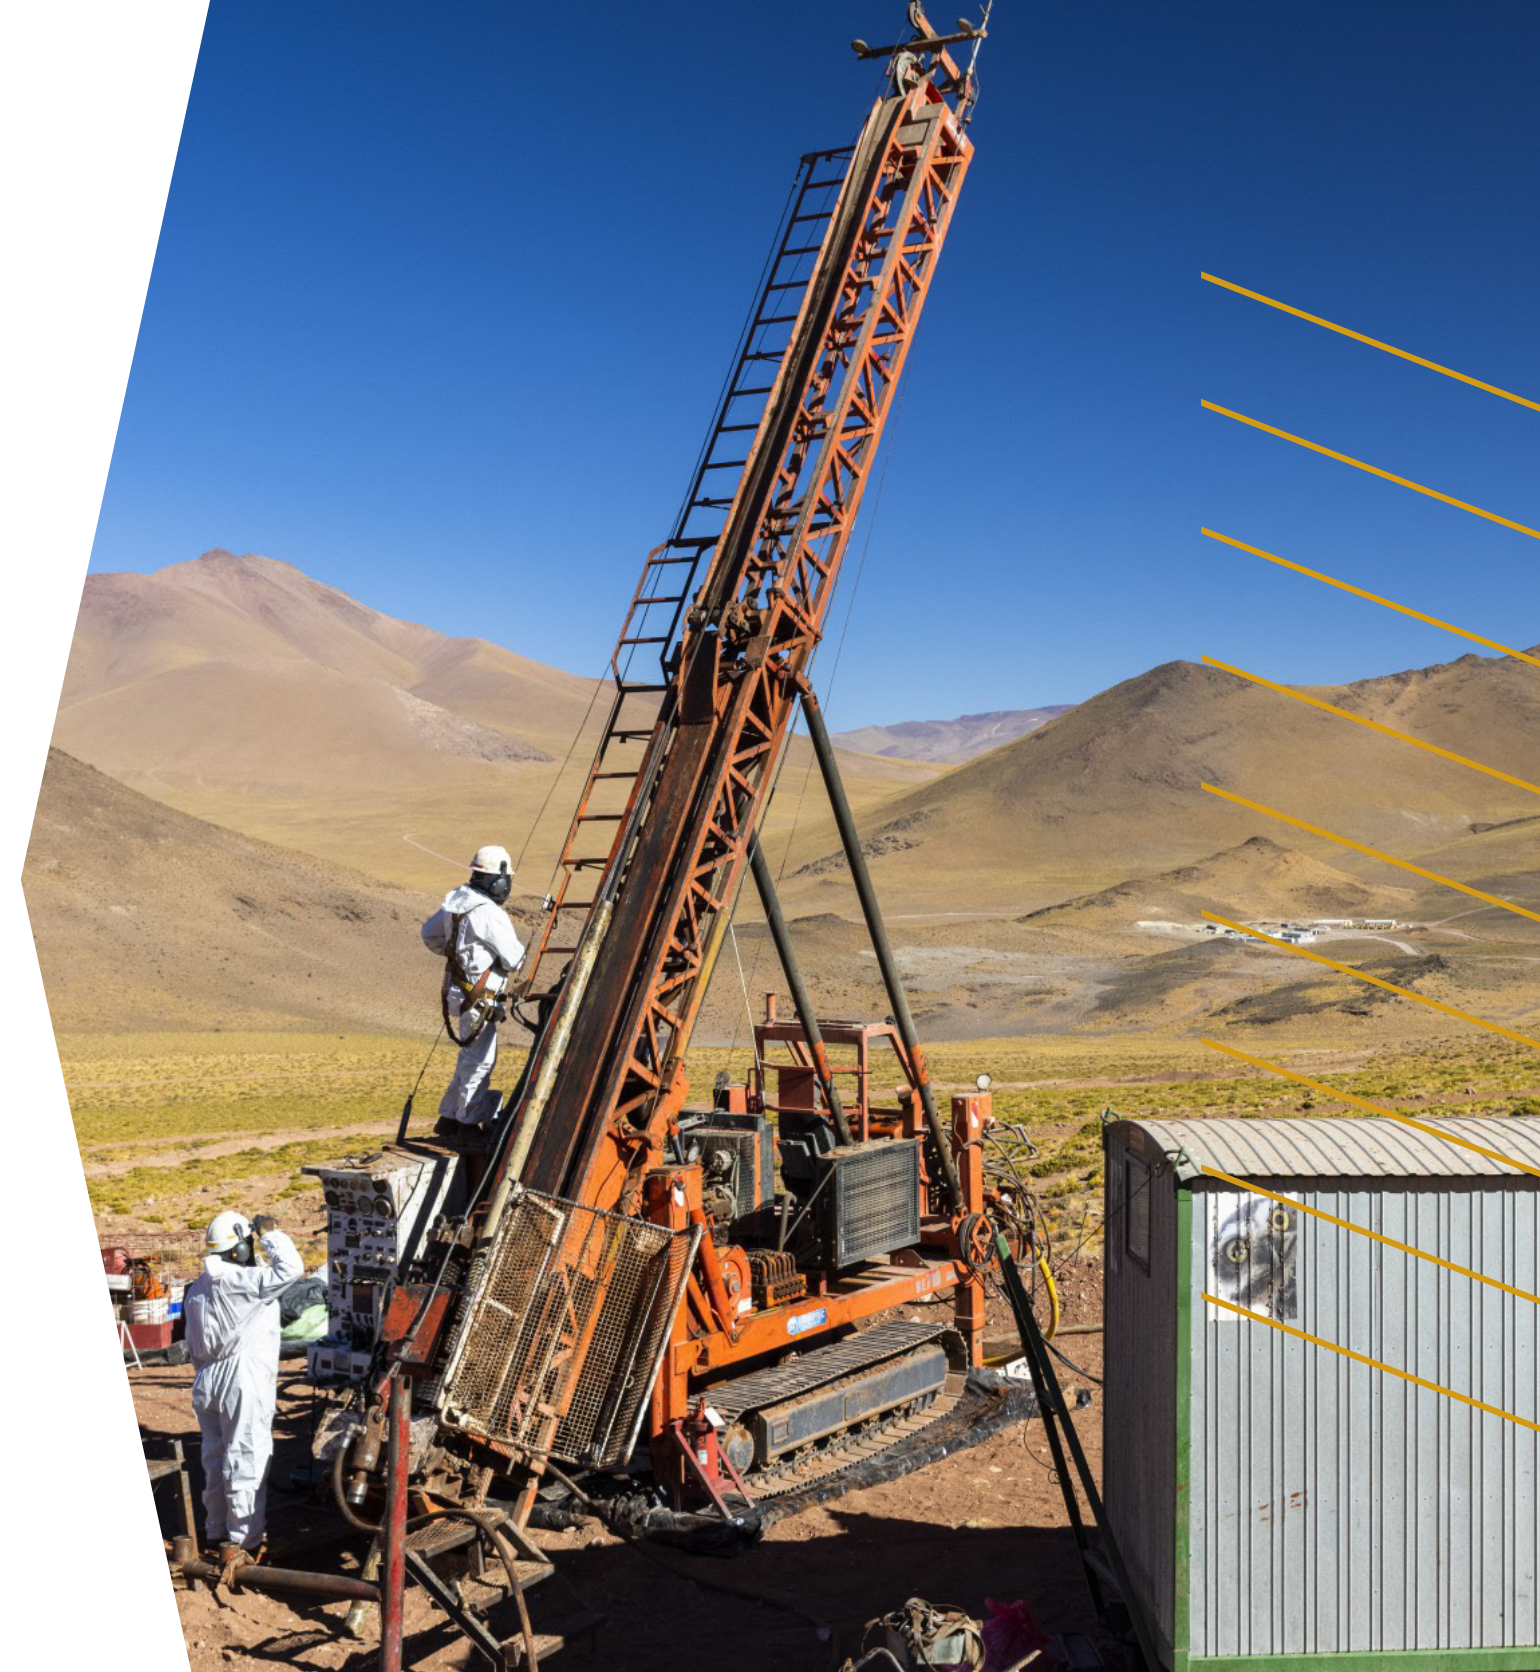

AbraSilver manages **air quality, waste, and potential acid rock drainage** through road watering, monitoring, preventive maintenance, geochemical studies, and waste management procedures.

68

BUILDING WASTE-MANAGEMENT
CONTROLS BEFORE
OPERATIONS SCALE UP

The **Environmental Control Program for Waste Management** defines the handling, storage, transport, and final disposal requirements for waste generated by the project.

21,977.54 KG
waste generated

1,764.32 KG
diverted from disposal

8%
recovered or recycled

MEASURING ENERGY AND EMISSIONS TO MANAGE FUTURE PERFORMANCE

In 2025, AbraSilver prepared its first GHG emissions inventory and continued incorporating on-site solar generation into the project's energy mix.

1,391.06 TCO₂E

first GHG inventory

13%

solar generation

TECHNICAL MONITORING IN HIGH-ANDEAN ECOSYSTEMS

Biodiversity management focuses on prevention, baseline studies, field monitoring, and collaboration with technical institutions.

ENVIRONMENTAL MANAGEMENT IS PART OF PROJECT READINESS

For AbraSilver, environmental performance means anticipating risks, strengthening data, and designing controls before Diablillos moves into its next stage.
